Question 8 - Scale the independent variables

SOLUTION:

```
from sklearn.preprocessing import StandardScaler
ss = StandardScaler()
x = ss.fit_transform(x)
x
```

OUTPUT:

Scale the Independent variables

Question 9 - Split the data into training and testing

SOLUTION:

```
from sklearn.model_selection import train_test_split

x_train, y_test = train_test_split(x, y, test_size=0.2, random_state=0)

print(x_train.shape)

print(x_test.shape)

print(y_train.shape)

print(y_test.shape)
```

OUTPUT:

Split into Training and Testing data

```
from sklearn.model_selection import train_test_split
x_train, x_test, y_train, y_test = train_test_split(x, y, test_size=0.2, random_state=0)

print(x_train.shape)
print(x_test.shape)
print(y_train.shape)
print(y_test.shape)
